

Criterion E: Evaluation

All information was gathered from the final consultation Appendix C.

Success Criterion

Criteria	Result and Clients Comments
The web application should be secure and protected from users other than the client.	Met. Client was satisfied.
The web application is viewed on a mobile device and desktop screen.	Met. Client is willing to deploy to the Azure cloud server to access on mobile phones.
The user can navigate to view all cards, programs, and reward types.	Met. Client was satisfied with the tables.
The user can add a card, program, person, and reward type.	Met. Client was happy with the added functionality.
The user can edit a card, program, person, and reward type.	Met. Client was satisfied.
The user can easily edit the points attribute on the card.	Met. Client was satisfied but also liked manually editing the number of points with the edit button.
The user can search for the name of a card, program, person, and reward type.	Met. Client suggested an improvement for this part, but was satisfied with its functionality.
The user can delete a card, program, person, and reward type.	Met. Client was satisfied.

Recommendations for the Future

- My client would like the design to improve. Thus, in future versions of this project I will add more visual imagery via pictures and color coding the table.
- My client would like the search feature to only bring up results that begin with the string query.
